

IN THE CLAIMS:

Please replace claims 1, 15, 22 and 32, as follows:

- B1 1. (Twice Amended) A system comprising:

an editor to provide for developing source code for a computer program, said source code including an identifier entered by a user when the user is entering source code in the editor; and an automatic help module invoked upon a predetermined event and operative to display information associated with the identifier including at least one of a description of the identifier, a description of the type of identifier and a description of syntax associated with the identifier for further entry by the user, said information being displayed directly in response to said predetermined event without further action by the user of the editor.

- B2 15. (Twice Amended) A method comprising:

developing at least a section of source code for a computer program, said source code including an identifier entered by a user when the user is entering said section of source code; detecting an event;

searching for information on the identifier including at least one of a description of the identifier, a description of the type of identifier and a description of syntax associated with the identifier for further entry by the user in response to the event; and

displaying the information directly in response to said event without further action by the user of the editor.

22. (Twice Amended) A computer comprising:

a processor;

a computer-readable medium;

B3
an editor to provide for developing source code for a computer program, said source code including an identifier entered by a user when the user is entering source code in the editor; and
an automatic help module invoked upon a predetermined event detected by the editor and operative to display reference information associated with the identifier including at least one of a description of the identifier, a description of the type of identifier and a description of syntax associated with the identifier for further entry by the user, said information being displayed directly in response to said predetermined event without further action by the user of the editor.

B4
32. (Twice Amended) A computer readable medium containing computer-executable instructions for performing a method comprising:

developing at least a section of source code for a computer program, said source code including an identifier entered by a user when the user is entering said section of source code;

detecting an event;

searching for information on the identifier including at least one of a description of the identifier, a description of the type of identifier and a description of syntax associated with the identifier for further entry by the user in response to the event; and
displaying the information directly in response to said event without further action by the user of the editor.

34 B
